Stamp 1G • No visa sponsorship required • Open for Relocation

PROFESSIONAL SUMMARY

MSc graduate in Information Systems Management (University of Galway, 2:1) with 4+ years of experience in data analysis, reporting, and data-driven decision support. Skilled in using SQL to retrieve, manipulate, and analyse data from complex relational databases, and experienced in delivering analytical outputs including dashboards, visualisations, and management reports to both technical and non-technical stakeholders. Familiar with Azure cloud services and data pipeline concepts through academic projects and industry certifications (AZ-900). Strong foundation in data quality, data validation, and reconciliation processes, with a consistent track record of improving accuracy and reducing manual effort. Comfortable working independently on analytical tasks and contributing to larger initiatives as part of a collaborative team. Open to relocation to Dublin.

TECHNICAL SKILLS

Data Analysis & BI: SQL (Microsoft SQL, MySQL, PostgreSQL) • Python (pandas, scripting) • Exploratory Data Analysis (EDA) • Statistical Thinking

Reporting & Visualisation: Data Visualisation (Matplotlib, Seaborn) • Dashboard Development • Management Information Reporting • Excel (Intermediate/Advanced — pivot tables, data analysis, reporting)

Data Quality: Data Validation • Data Reconciliation • Root Cause Analysis • Data Cleaning • Accuracy & Quality Controls

Cloud & Platforms: Microsoft Azure (AZ-900) • Azure SQL Database • AWS (EMR, S3, Kinesis, Flink) • Apache Spark • REST APIs

Collaboration & Delivery: Stakeholder Communication • Cross-Functional Collaboration • Agile / Scrum • JIRA • Documentation • Independent Delivery

WORK EXPERIENCE

Purple Style Labs Private Limited — Data Analyst

2022 – 2025

Mumbai, India

- Used SQL to retrieve, manipulate, and analyse structured and unstructured data from relational databases, supporting product updates, feature investigations, and business decision-making across engineering and product teams.
- Designed and delivered analytical reports and management information outputs consumed by product and engineering stakeholders, translating complex data findings into clear, actionable insights for both technical and non-technical audiences.
- Built a structured SQL-based data validation and reconciliation framework, improving data accuracy by ~30% across release cycles and ensuring analytical outputs consistently met quality and accuracy standards.
- Designed automated, data-driven analytical workflows using Python (pandas) and Selenium, reducing reporting cycle time by ~35% and improving the reliability of data-dependent outputs.
- Developed and maintained reusable Python scripts for repeated data validation tasks, reducing manual effort by ~40% and improving consistency and data quality across releases.
- Investigated data discrepancies and anomalies by analysing logs, database records, and behavioural trends performing root cause analysis and ensuring issues were resolved before impacting downstream reporting.
- Collaborated with cross-functional teams in an agile environment to deliver analytical outputs on schedule, contributing to sprint planning, requirements discussions, and knowledge sharing across the team.

Key Achievements:

- Reduced recurring data investigation time by ~25% by identifying repeat failure patterns through structured log and query analysis, contributing to continuous improvement of analytical processes.
- Improved data validation accuracy by ~30% by implementing structured SQL-based reconciliation checks during release cycles, ensuring all management information outputs were accurate and production-ready.

Ubisoft Entertainment Pvt. Ltd. — Data & QA Analyst

2020 – 2022

Pune, India | AAA Titles: Assassin's Creed, Far Cry 6

- Analysed large volumes of gameplay, event, and telemetry data to identify behavioural anomalies, inconsistencies, and data quality issues — applying strong analytical and problem-solving skills to complex, high-volume datasets.
- Created and maintained structured reporting documentation and test case datasets, improving data quality tracking and management information visibility across the QA team.
- Implemented a structured weekly reporting method that improved data accuracy and visibility of quality trends by 15%, providing clearer insights to team leads and stakeholders.
- Collaborated with international teams to design, review, and validate datasets covering diverse scenarios; enhanced defect-tracking workflows in JIRA and TestRail to improve categorisation, pattern recognition, and reporting precision.
- Identified statistical patterns in recurring defect data, enabling earlier detection and reducing late-stage issues demonstrating quantitative analysis and attention to detail in a data-rich environment.

Key Achievement:

- Enhanced reporting precision through improved data categorisation and pattern recognition in defect datasets, directly improving the quality of management information shared with stakeholders.

ACADEMIC PROJECTS

Real-Time Stream vs Batch Processing for Predictive Analytics — MSc Major Project

2025 – 2026

University of Galway | Python, AWS (EMR, S3, Kinesis, Flink), Apache Spark, scikit-learn

- Conducted a two-phase empirical study using Python to build and evaluate predictive analytics models on CSO Ireland's national electricity dataset — engineering a 10-dimensional feature set with lag features, rolling statistics, and cyclical encodings, directly applying EDA and statistical analysis skills.
- Delivered clear analytical outputs comparing batch (Gradient Boosting, $R^2 \approx 1.0$) and streaming (SGD, 2.5× lower latency) model performance, producing evidence-based recommendations communicated to both technical and non-technical audiences.
- Architected and documented cloud-native analytical pipelines on AWS (EMR/Spark, Kinesis/Flink); experience with distributed data processing environments directly relevant to Azure Databricks and lakehouse architectures referenced in the role.

SmartCare — Cloud-Based Patient Appointment & Consultation System

2025 – 2026

University of Galway | Microsoft Azure, Azure SQL Database, REST APIs, Python

- Designed a relational database schema, built RESTful APIs, and configured Azure SQL Database with access controls gaining hands-on experience with Microsoft Azure data services directly relevant to Azure Databricks, Fabric, and Semantic model environments.
- Produced architecture diagrams and deployment documentation, translating technical system design into clear outputs for a non-technical audience demonstrating the communication and documentation skills central to this role.

EDUCATION

National University of Ireland, Galway

September 2025 – June 2026

MSc in Information Systems Management | Grade: 2:1 | Modules: Advanced Analytics (Python), Database Systems (SQL), Cloud Computing, Statistical Methods, Business Modelling & Decision Support

University of Mumbai

August 2016 – September 2020

BEng in Instrumentation Engineering | GPA: 6.62 / 10 | Quantitative discipline with strong mathematics, statistics, and data systems foundations

CERTIFICATIONS & ACHIEVEMENTS

- Microsoft Azure Fundamentals (AZ-900)
- AWS Cloud Practitioner (CLF-C02)
- Robotics and IoT — Indian Institute of Technology, Mumbai
- Raspberry Pi & Python Language Training — Ramrao Adik Institute of Technology, Mumbai
- Winner, Chrysalis 2019 (Inter-Department Project Competition)
- 2nd Runner-Up, Srijan 2019 (National Level Project Competition)
